# BAGPRESS

*Designed to preform, built to last.*

- The solution to on farm storage
- Open and close as required
- No waste

# SAMCO BAGPRESS

*The Samco BagPress  
The solution to on  
farm storage.*

There is no waste and is user friendly as you can open and close as you wish. With the Samco BagPress you can have unlimited low cost storage wherever it is required. Different feeds can be mixed and bagged. The air tight environment creates the perfect conditions for the fermentation process to occur giving you the best quality silage possible. The small face on the bag reduces to the risk of silage going bad as it is less exposed to oxygen than a traditional type pit or clamp system. With the Samco Bag Press you can feed out using either the front end loader bucket or else it can be self fed.

**1. Samco Patented Paddle Brake System:** The paddle brakes are applied to the rear tyres of the tractor which allows the machine to move slowly forward as the bag is tightly packed.

**2. Steering System:** This steering system is adjustable from the cab by using the hydraulics to keep the bagger and tractor in a straight line.

**3. Heavy Duty Chain:** A heavy duty 1¼ inch duplex chain is submerged in an oil reservoir where it is constantly lubricated while working.

**4. 500mm Auger:** Due to the large auger the Samco BagPress can bag a high number of tonnes per hour. The rear propeller is shaped to ensure the bag is tightly packed to full capacity.

**5. Heavy Duty PTO:** The heavy duty PTO shaft is capable of taking over 200 Hp.

**6. Top Agitator:** This additional agitator assists the main auger and effectively prevents bridging.

**7. Bag Size:** Available in 2m (6ft.6) and 2.4m (8ft) bags

**8. Useful Guidelines:** Samco bags are marked with two guidelines which indicate that the bag is packed to the correct pressure.
