

GROUND BREAKER

Levels and grades soil to uneven parts of the field leaving a level clean finish.

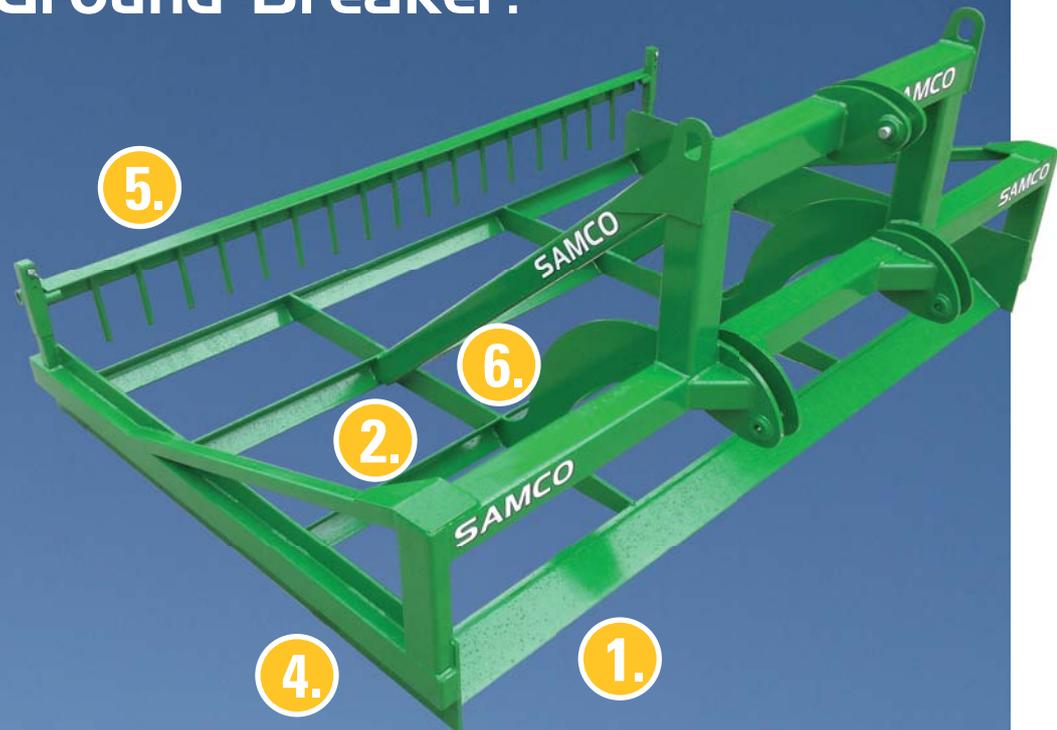

Innovatively designed to collect stones in a very quick and economically friendly manner.

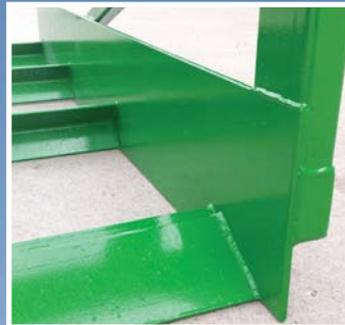

The Samco Ground Breaker:

The ultimate machine on the market for field levelling, stone picking and its ability to endure many years of hard work.

When used with a hydraulic top link the ground breaker becomes an effective grading tool as the operator controls the amount of soil moved by the machine.

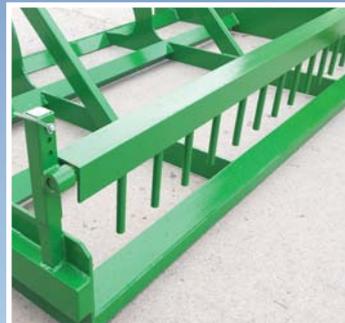

1. Hardened cutting edge blade:
Shaves stones and rocks into the ground breaker without any springing or jumping off the ground.

4. Sides of 300 mm height to avoid spillage.

2. Three levelling blades ensure a firm and level seed bed.

5. Trapping bar:
Catches stones and is hinge mounted to allow for reversing. Bar can be raised or lowered depending on conditions.

3. Hydraulic top link:
Adjust top link to change the angle on the cutting edge blade to shift as much soil as needed.

6. Curved support blade:
Allows soil and stones to move freely through the ground breaker without build-up of soil at first point of work.
